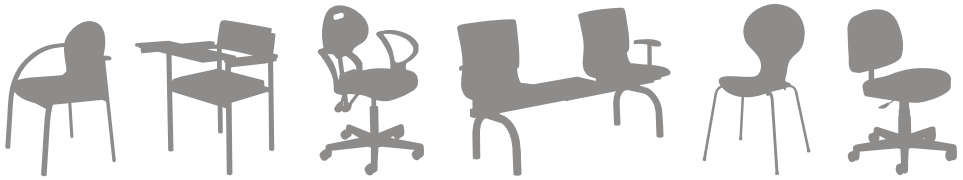
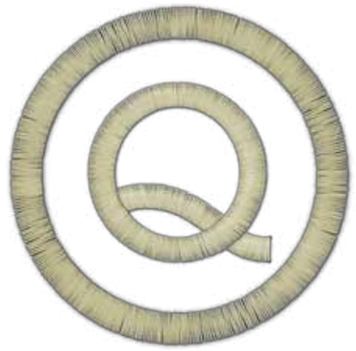
summit



Essential collection

Manufactured in the UK

Summit Chairs has been manufacturing commercial seating since 1977. Over the years we have built an enviable reputation for quality, workmanship and service. Everything, from the frame construction and upholstery through to assembly, is carried out by our own highly skilled UK-based work force. This enables us to continually monitor and improve processes, bringing to the market innovative new ranges that deliver on all counts: aesthetics, ergonomics, quality, function and price. As an environmentally-conscious organisation, we are also committed to maintaining zero conflict between our business and environmental principles. In fact we firmly believe that improvements in one field can help drive the other.



Quality Assured

Summit Chairs enjoys UKAS accredited, ISO9001 quality management certification. We are also members of SATRA who assist us in the development and product testing process. This ensures our seating products achieve the highest levels of strength, reliability and stability, supported by our comprehensive 5 year warranties. Indeed all our operator and task chairs exceed the minimum EU requirements for VDU seating. Structural components have also been thoroughly tested to BS5459.

Sustainability

Summit Chairs has ISO14001 environmental management certification and is a full member of FIRA's Furniture Industry Sustainability Programme (FISP). Specifically designed for the furniture industry, FISP requires us to meet far more stringent and wide ranging levels of accountability over and above those set out in ISO14001. It is also important for us to ensure maximum levels of product recyclability – and, where possible, to use recycled materials in our production processes.

The Essential Collection of utilitarian seating is supremely fit for purpose for a wide variety of working environments. Durable and visually appealing there are ranges ideally suited to office, education, conference, healthcare and industrial applications. Whilst all the chairs have 5 year structural warranties for 8 hour per day use, as testament to the quality of their manufacture a number of ranges have frames warranted for 15 years.
